

Sundew Dx: Revolutionizing Lung Cancer Detection

Denis Victorov, John Vorwald, Xiujun Fan, Alexandra Jensen, Zaid Slayyeh, Rohan Kumar, Tiya Shah, Ruthie Carmeli

The Urgent Need for Early Detection

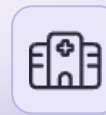

Lung Cancer Crisis

125,000 US deaths annually

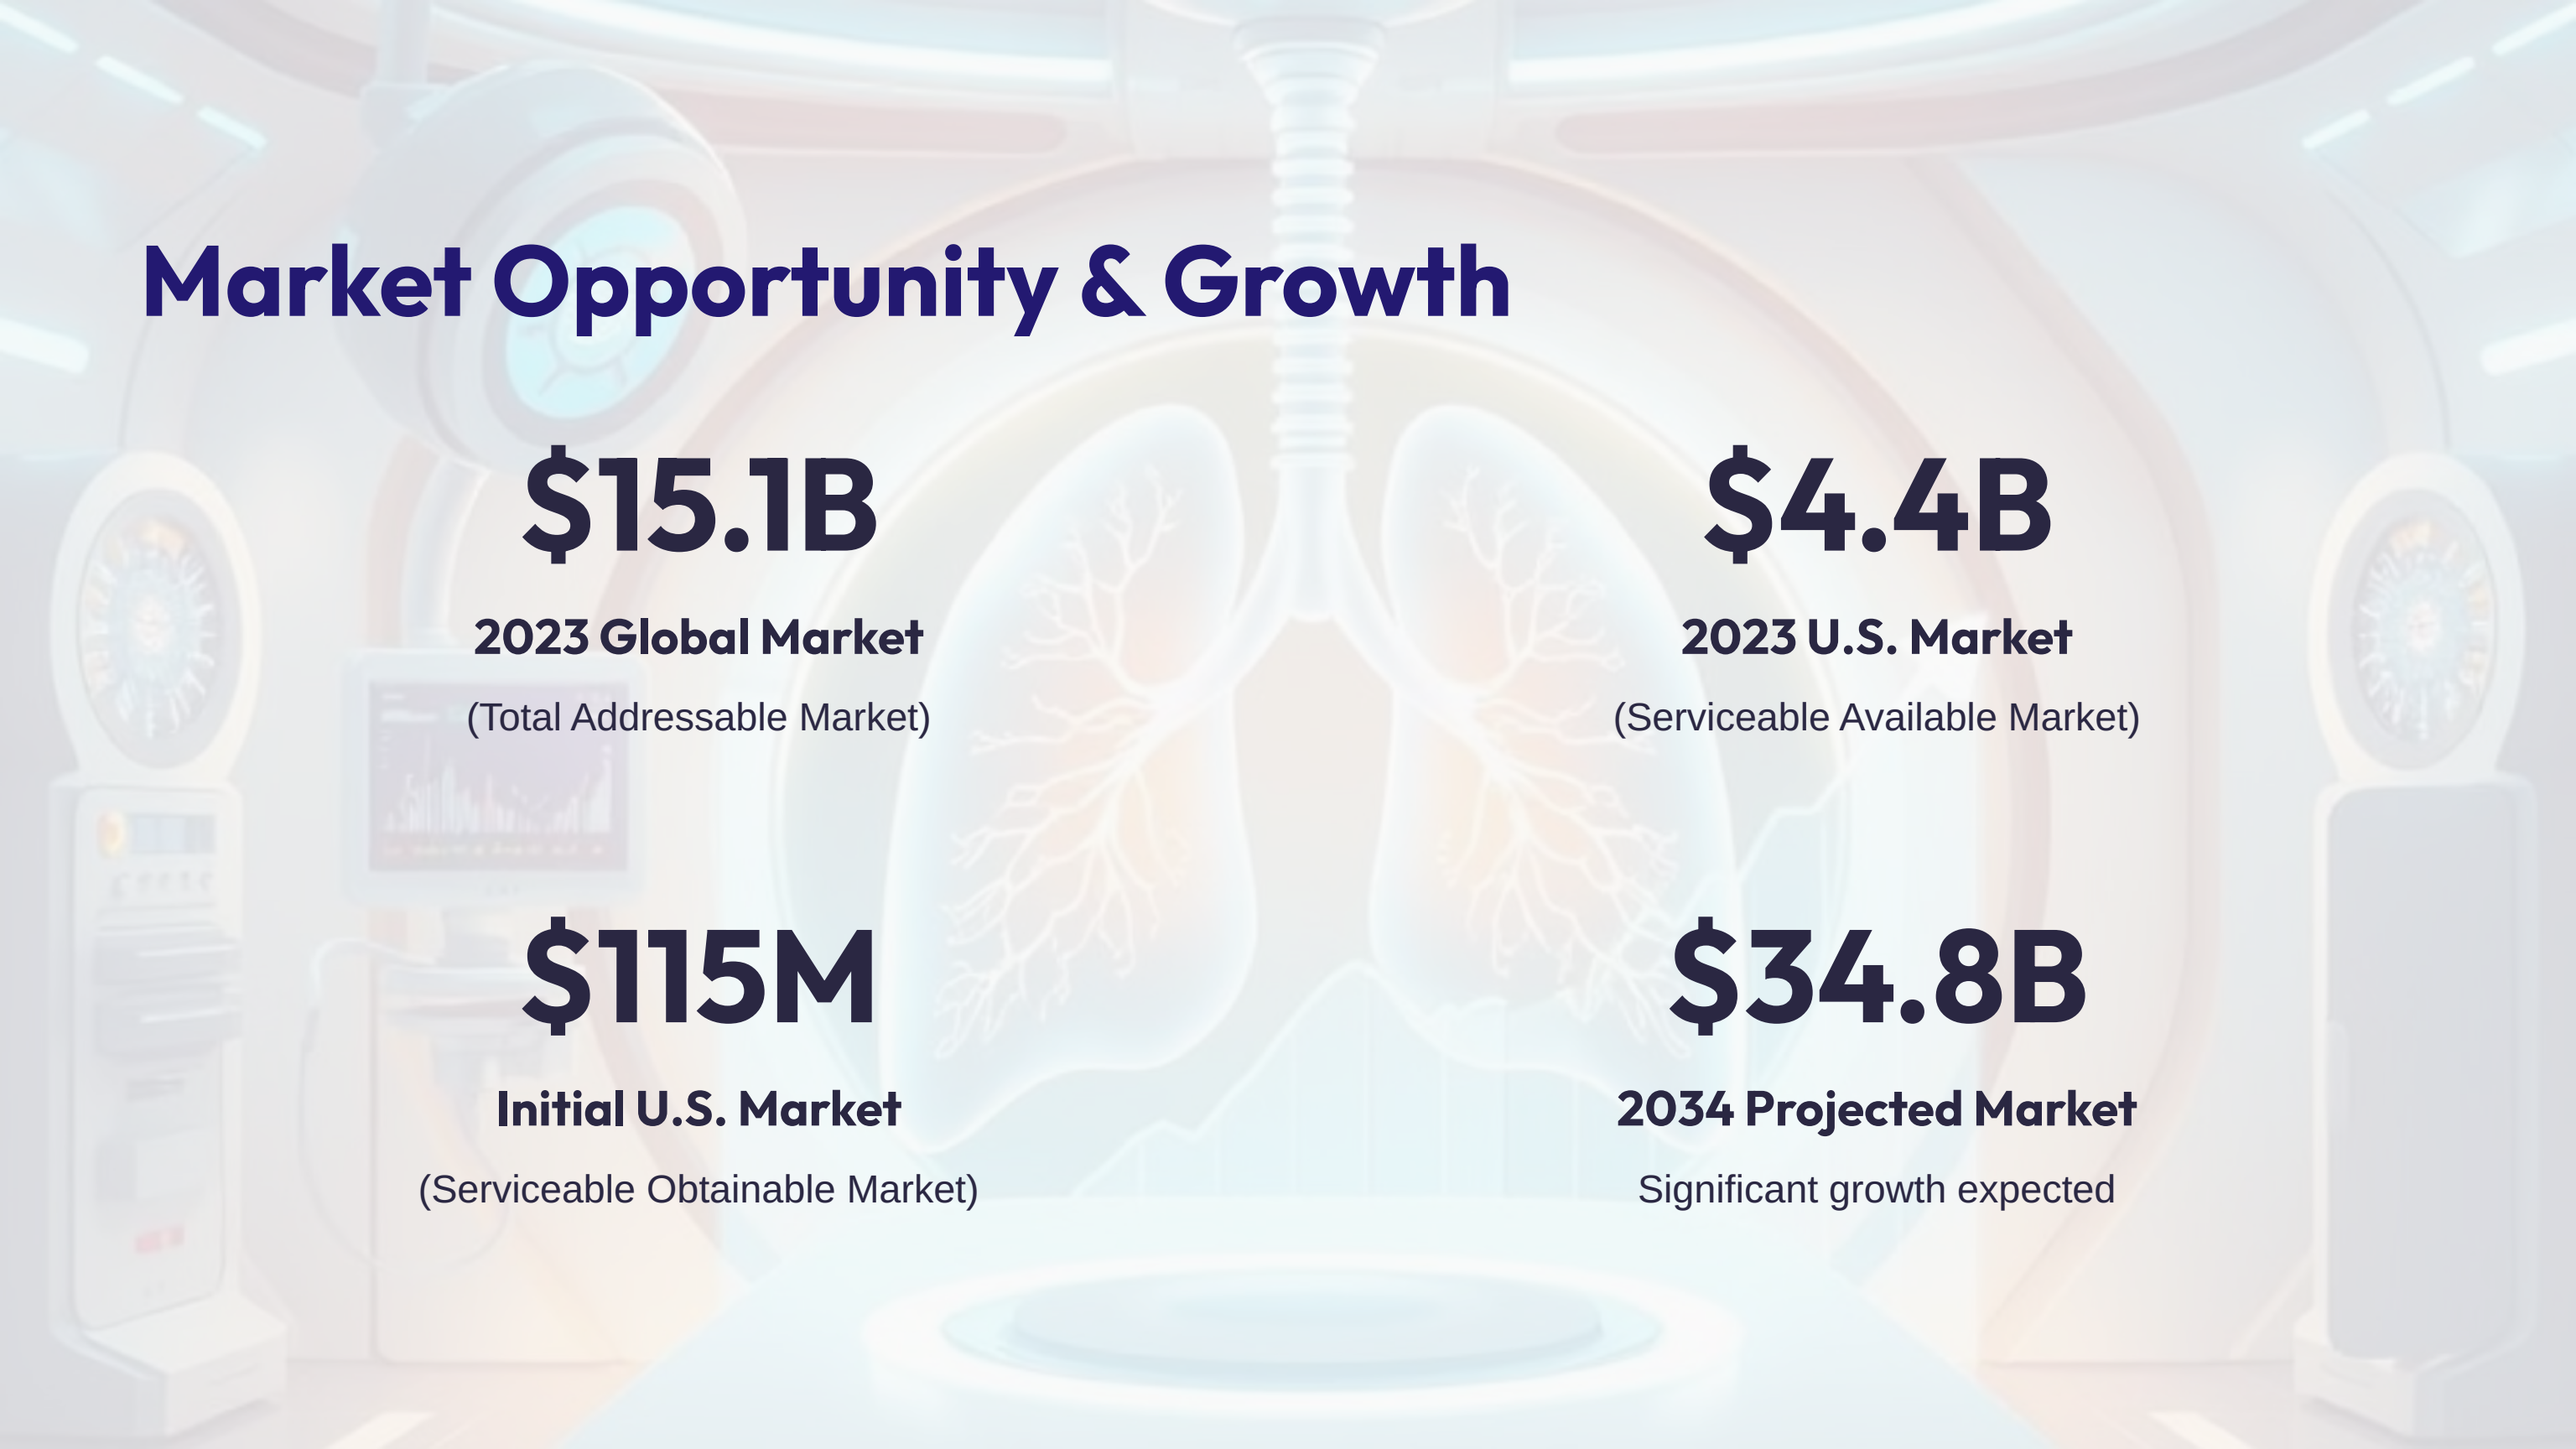

Low Screening Uptake

Only 16% currently get screened

Earlier Diagnosis

Increases treatment effectiveness

The background of the slide features a stylized illustration of human lungs in the center, with a trachea leading up to them. Surrounding the lungs are various medical elements: a large circular light fixture at the top, two circular monitors on the left and right sides, and a medical cart with a screen and buttons on the left. The overall color palette is light blue, white, and soft orange.

Market Opportunity & Growth

\$15.1B

2023 Global Market

(Total Addressable Market)

\$4.4B

2023 U.S. Market

(Serviceable Available Market)

\$115M

Initial U.S. Market

(Serviceable Obtainable Market)

\$34.8B

2034 Projected Market

Significant growth expected

Sundew's Innovative Solution

Low-Cost & Convenient

Costing less than most standard screens and can be done from home

Highly Sensitive

RNA Aptasensing technology detects VOCs in exhaled breath condensate

Non-Invasive

Removes risks and transportation traditionally required for screening

Product Overview

Portable Device

Detects VOCs in breath condensate.

RNA Aptamer Biosensor

High sensitivity and specificity for VOCs.

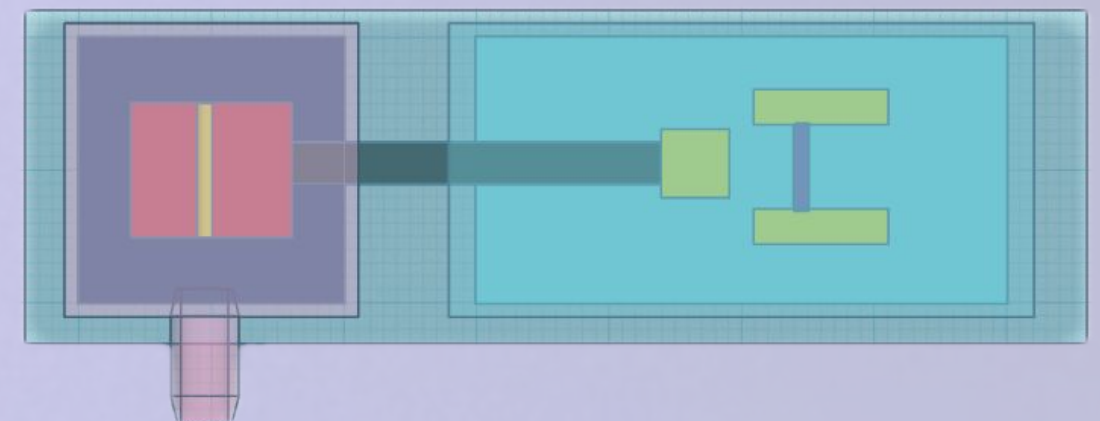

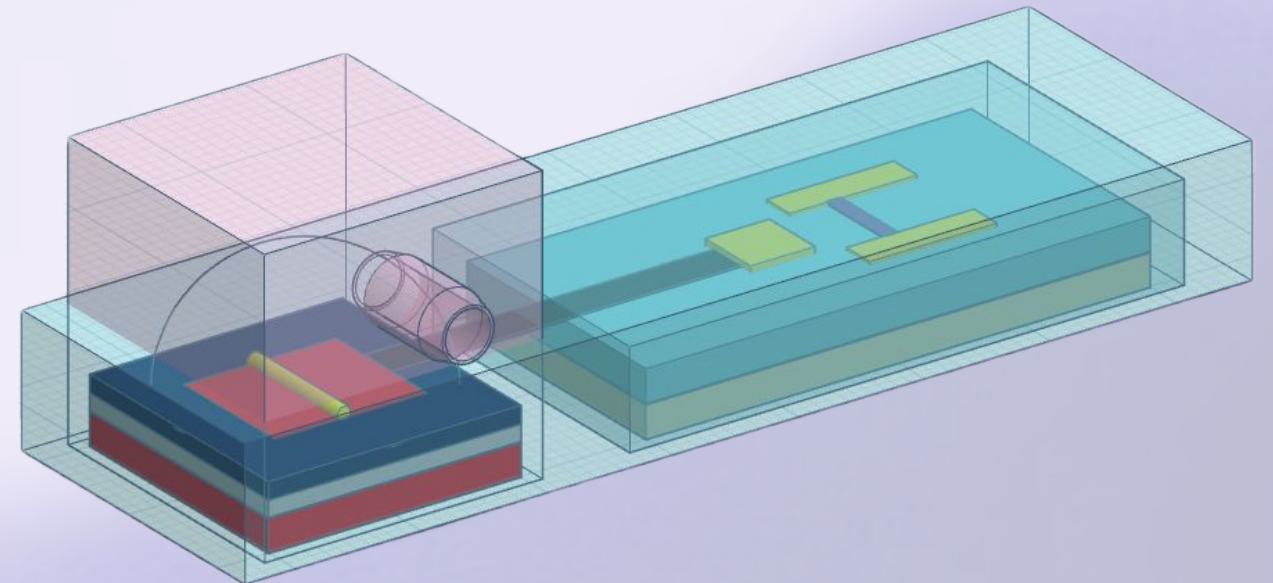

At-Home Screening

Removes barriers like cost of transit and discomfort.

Accurate & Safe

No radiation or invasive procedures.

Strategic Product Evolution

1

Screening Launch

D2C wellness tool, allows patients to track biomarker trends & build/test UI

2

Performance Assessment

Refine device with user feedback, clinical benchmarking

3

Capability Expansion

Scale partnerships, broaden VOC detection

4

Diagnostic Approval

Pursue 510(k) for Class II device status

Funding Requirements & Allocation

\$2.5M Seed Funding Target

Cover critical development phases and prepare for commercialization.

Three Staged Tranches Tied to Milestones

\$1M for Phase 1 - Product Development & Prototyping

\$750K for Phase 2 - Clinical Trials & Regulatory Filing

\$750K for Phase 3 - Market Entry & Commercial Scale-up

Key Investment Allocation Areas

Funds will be primarily allocated to securing specialized lab leases (\$300K), attracting top talent in biosensor engineering and clinical research (\$1.2M), and establishing critical CDMO (Contract Development and Manufacturing Organization) partnerships (\$1M) for large-scale production.

Pricing & Commercialization Strategy

Affordable Cartridge Refills

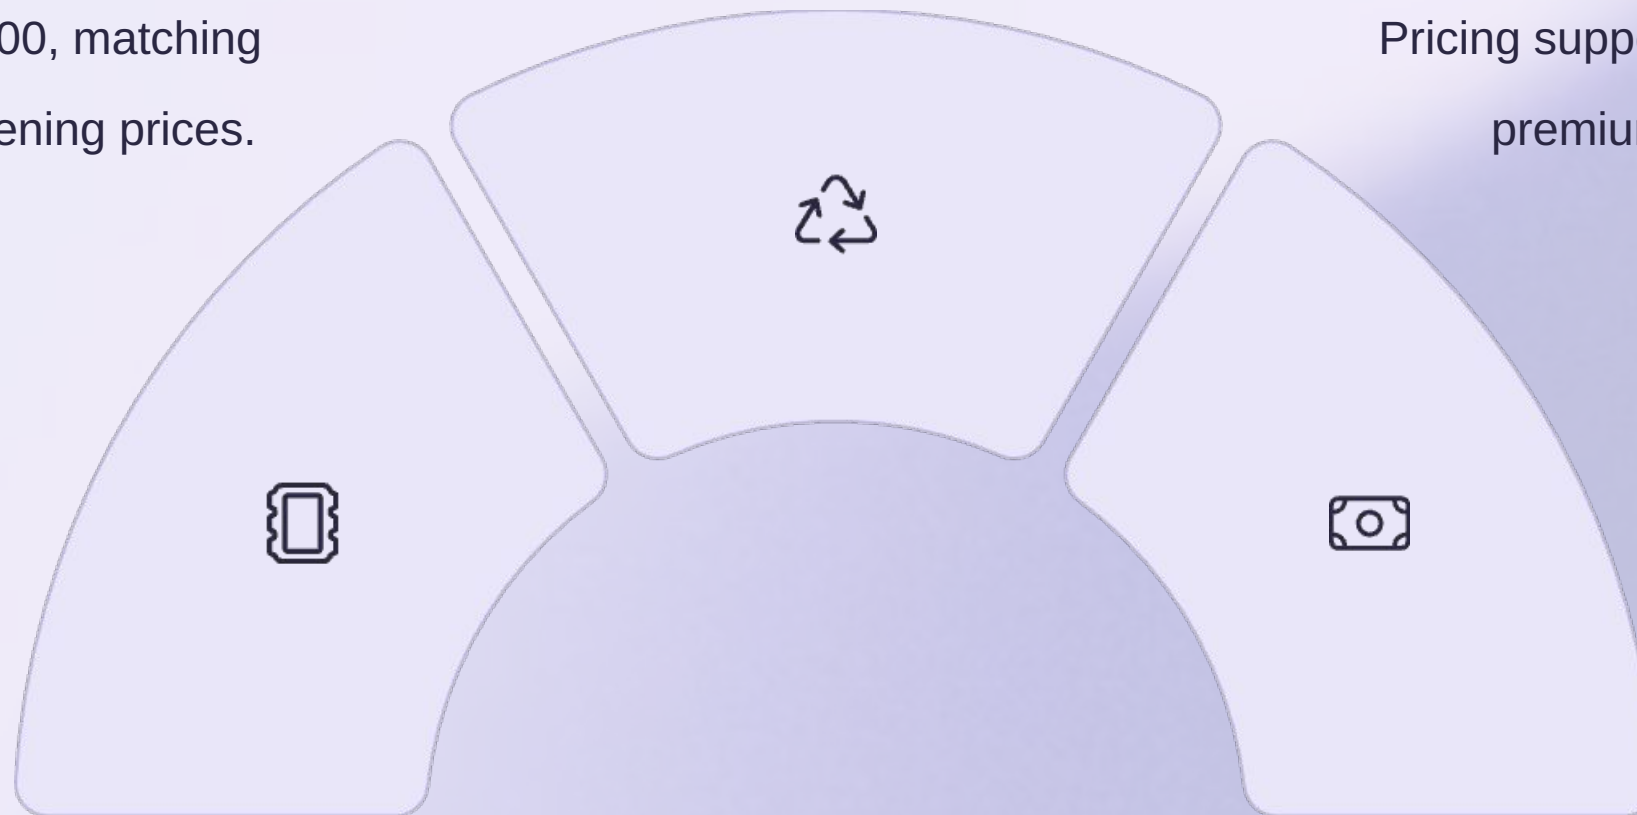

Disposable cartridges priced \$30–\$50,
enabling recurring revenue.

Competitive Device Pricing

Device costs \$300–\$500, matching
entry-level LDCT screening prices.

Value & Flexibility

Pricing supports bundled services and
premium AI-based insights.

Exit Strategy & Future Vision

IPO

Expand to other disease detection

Acquisition

If market conditions favor, for early investor liquidation.

Licensing

Concurrent revenue stream for future R&D.
